

7.102.NL187-1

This is a drawing of a section through the floor pan at the drain looking forward.

The following are comments from Frank Grimaldi, s letter of September 19, 1986.

"The dimension I need is the actual amount that the flat rear portion of the floor protrudes below the lower edge of the outside trim strip which runs along the bottom of the rocker panel"

"I have attached a sketch of the rear floor construction thru section A and have shown a simple measurement with a short ruler which could be easily done to verify the actual measurement from the outside any car. It might be interesting to do a survey of these dimensions "from any GTE laying around!"

"An additional bit of trivia is that the stiffening ribs and patterns are different for the various floor layers"!!
